

Helitech International 2015

## **Airbus Helicopters H160 program in full swing**

- H160 has reached 175 kts and altitude of 10 000 feet
- First flight of second prototype planned before the end of the year

London, 6 October 2015 – The H160 mock-up is making its British debut today at Helitech, as the program steadily pursues its flight test campaign. The first prototype flights are progressing according to plan and the aircraft has already reached a maximum speed of 175 kts and an altitude of 10 000 feet. As the validation of technical parameters is followed closely, the flight tests also provide a perfect opportunity for the fully integrated ground support teams to optimise maintenance activities.

The second prototype (PT2) is progressing as per plan since its power on in June. As one of the key priorities of the H160's development program is maturity at entry into service, the Turbomeca Arrano engines will be installed and tested on the dedicated integration installation called the Dynamic Helicopter Zero before the PT2 performs its first flight by the end of this year.

"The flight envelope opening of the H160 is well paced - thanks to the relevance of our investments in new generation test benches" said Guillaume Faury, CEO of Airbus Helicopters. "We are excited to present the H160 at Helitech and we are in a good position to begin its commercialisation next year, with the end objective of having a fully mature product ready to be delivered in 2018", he added.

A new generation 5.5 to 6-tonne twin-engine helicopter, the H160 will be tailored for a wide range of applications, including oil & gas operations, emergency medical services, public service, and private and business aviation. Placing customer satisfaction at the heart of its design, the program is continually working with customers on mission specific aspects, whether it is on the oil & gas segment or the VIP segment which just saw the launch of the H160 VIP interior design contest. Customers and opinion leaders will be at the heart of the innovative selection process.

### **About Airbus Helicopters** ([www.airbushelicopters.com](http://www.airbushelicopters.com))

Airbus Helicopters is a division of Airbus Group. The company provides the most efficient civil and military helicopter solutions to its customers who serve, protect, save lives and safely carry passengers in highly demanding environments. Flying more than 3 million flight hours per year, the company's in-service fleet includes some 12,000 helicopters operated by more than 3,000 customers in 152 countries. Airbus Helicopters employs more than 23,000 people worldwide and in 2014 generated revenues of 6.5 billion Euros. In line with the company's new identity, fully integrated into Airbus Group, Airbus Helicopters has renamed its product range replacing the former "EC" designation with an "H".
